

The GSI Newsletter/Report

Geosynthetic Institute

Vol. 30, No. 4

December, 2016

This quarterly newsletter, now in its 30th year, presents the activities of GSI and its related institutes to all who are interested. It is available on the institute's home page at www.geosynthetic-institute.org. It also serves as a quarterly report to its member organizations. Details are available by contacting George R. Koerner or Marilyn Ashley at phone (610) 522-8440; fax (610) 522-8441 or e-mail at gsigeokoerner@gmail.com or mvashley@verizon.net.

*Happy Holidays and a Healthy
and Prosperous New Year*

Activities of GSI's Directors and Officers

1. A CD of the 30-papers presented at the ASCE Symposium in Chicago is available. Contact Marilyn at mvashley@verizon.net for a copy.
2. The new complete on-line "Designing With Geosynthetics" textbook is available. See the Education section of this newsletter/report for details.
3. The new accompanying "Geosynthetic Designer Certification" program is also available. It follows the structure of our other two certification programs (QA/QC of Waste Containment Systems and MSE Walls) and is described in the certification section of this newsletter/report.
4. Two new White Papers (Electrical Leak Location Surveys and Geotextile Filtration for MSE Walls) have just been added to our website; <http://www.geosynthetic-institute.org/whitepapers.htm>.
5. Elections for the GSI-BOD have been completed for the 2017-2019 time frame. Kent von Maubeuge has been reelected while A. K. Mukhopadhyay and Ashish Sukhadia are newly elected. In this regard we extend sincere thanks to Edgard Chow of Kuraray for past representation on the Board.
6. The nine person GSI Board of Directors is presently as follows:

Term Ends 2017

- Tony Eith - CEC Consultants , Inc. (Consultants and Testing Labs)
e-mail: teith@cecinc.com
- Nathan Ivy - AGRU America Inc. (Geomembranes and GCL's)
e-mail: nivy@agruamerica.com
- Moreno Scotto - Maccaferri (International - 2)
e-mail: moreno.scotto@gmail.com

Term Ends 2018

- John Workman - Waste Management Inc. (Owners and Operators)
e-mail: jworkman@wm.com
- Mark Wayne – Tensar Earth Technology (Geotextiles and Geogrids)
e-mail: mwayne@tensarcorp.com
- Sam Allen – TRI Environmental Inc. (At-Large)
e-mail: Sallen@tri-env.com

IN THIS ISSUE

- Activities of GSI's Directors and Officers
- Overview of GRI Projects (Research)
- Progress within GII (Information)
- Progress within GEI (Education)
- Activities within GAI (Accreditation)
- Activities within GCI (Certification)
- The GSI Affiliated Institutes
- New "Designing With Geosynthetics" On-Line Course and Certification Program
- GSI's Member Organizations

Term Ends 2019

- Kent von Maubeuge - NAUE GmbH & Co. KG (International-1)
e-mail: kvmaubeuge@naue.com
- A. K. Mukhopadhyay – BTRA & GSI-India (Agencies)
e-mail: btra@vsnl.com/btradirirector@gmail.com
- Ashish Sukhadia – Chevron Phillips (Resin and Additives)
e-mail: sukhaam@cpchem.com

Overview of GRI Projects (Research)

The following projects are all funded by GSI membership dues unless specifically noted. Most are long-term projects for which we are well positioned to accomplish. *Those projects marked with an asterisk have written papers available; please ask and we will send them accordingly.* Contact George Koerner (gsigeokoerner@gmail.com), Grace Hsuan (g.hsuan@coe.drexel.edu) or Bob Koerner (robert.koerner@coe.drexel.edu) for details and/or discussions.

1. **In-Situ Temperature Monitoring of Liner and Cover Geomembranes in Dry and Wet Landfills*** - George Koerner is measuring the in-situ temperature behavior of liner and cover geomembranes and has installed multiple thermocouples for long term measurements in both wet and dry municipal solid waste landfills in Pennsylvania. The project has been extended into its 19th-year and has resulted in an extremely authoritative set of real-life data which is being used by many researchers in their geomembrane lifetime predictions.
2. **Flow Behavior of Innovative Leachate Collection and Removal Systems (LCRS's)** – Several new geocomposite drainage systems are being compared to traditional geonet composites. The project is in its second year and will be a multi-year effort.
3. **Field Exposed Lifetime of Geogrids Used at the Facing of Landfill Berms** - The facing of mechanically stabilized earth landfill berms (and other walls and slopes as well) is often using a wrap-around configuration leaving the geogrid exposed to the atmosphere. A project being conducted by George Koerner is presently investigating two different geogrids behavior over time. A 50-year time frame is envisioned! The long-term behavior will eventually be compared to UV laboratory exposed data as noted in Item #8 below.
4. **Laboratory Exposed Lifetime of Geomembranes*** - GSI is using three UV-

fluorescent devices to estimate the projected exposed lifetime of six different types of geomembranes. They are HDPE, LLDPE, fPP, EPDM, PVC (N.A.) and PVC (Euro.). They are being incubated at 60, 70, and 80°C until half-life or strength and elongation are measured. The goal is lifetime prediction. Some will take at least 90,000 light hours (\approx 12.3 years). GRI Report #44 is available on results to date and a webinar is also available. The information was made available to the public in April 2016 and was the topic of our Keynote Lecture. It has now been republished in the International Geosynthetics Journal. A copy is available. (In this regard it should be noted that we have withheld the information before publication for well over a year which has been our custom.)

5. **HDPE Geomembrane Lifetime as a Function of Thickness** - This often encountered question is being evaluated by exposure at 80°C in a QUV weathering device per ASTM D7238. Formulations are exactly the same and only the sample thicknesses vary. These thicknesses are 2.76, 2.44, 1.58, 1.08, 0.77 and 0.48 mm. Parameters being evaluated in this decade long study are change in thickness and presence of crazing or cracking. Time will tell!
6. **Laboratory Exposed Lifetime of PVC (European) Geomembranes** - We have been evaluating five different European formulations for four years using three dedicated UV-fluorescent devices and the results are very impressive. The study is being conducted for CARPI Tech, a GSI member organization. This also allows us to distinguish between PVC geomembranes manufactured in North America versus Europe. The differences are in the type of plasticizers used in the formulations as well as thickness.
7. **Laboratory Exposed Lifetime of Geotextiles** - A similar UV study as with geomembranes (Items 5, 6 and 7), geogrids (Item 8) and TRM filaments (Item 9) has been conducted on various geotextiles. Woven monofilaments, woven slit films, nonwoven heat bonded and needle punched types are included. In the latter are four different weights of needle punched nonwovens. All data along with laboratory and field lifetime predictions are included in GRI Report #44 and the aforementioned International Geosynthetics Journal paper.
8. **Laboratory Exposed Geotextile Yarns** - A new effort on behalf of a member organization (TenCate) is evaluating polypropylene yarns with and without long-term antioxidants. It will be interesting to observe differences in behavior insofar as long-term strength and elongation. As with all of our long-term exposure research, incubation is using UV-fluorescent devices per ASTM D7238.

9. **Laboratory Exposed GeoFoam** - A new study examining the exposed lifetime of EPS and XPS geof foam has been concluded. Incubations were at 80, 65 and 55°C according to ASTM D7238 the UV-fluorescent exposed device. The criterion being used is thickness decreases over time since the phenomenon involved is a gradual powered of the samples. Results are available but not yet published.
10. **Cable Tied Geonet Evaluations** - A new study has been focused on the plastic cable ties used to connect the overlapped ends and edges of geonets and geospacers. The draft of a new GRI Test Standard is available as well as the draft of a technical paper.
11. **Retaining Wall Failure Evaluations*** - We presently have GRI Reports 38, 39, and 40 addressing mechanical stabilized earth (MSE) walls using geosynthetic reinforcement which document 82-failures. Our data base has now grown to 141, then 171, then 286 and now 301! *Readers, we have a very serious situation in this regard!* The failures are either excessive deformation or collapses. We have presented one-day courses on this topic along with inspector training and development insofar as a field inspectors certification program; see the certification section of this Newsletter/Report. We have just recently presented the findings at two geotechnical conferences; one in Williamsburg and the other in Hershey. A paper was published by the Journal of Geotextiles and Geomembranes in October, 2013 and the publisher (Elsevier) reports that 900 requests have been made to date. It was voted as being the best paper of 2013 by the journal. This was the topic of a GSI course and lecture presented at GeoAmericas in April, 2016. An up-to-date GSI webinar is available.
12. **pH Between Masonry Block Wall Units*** - George Koerner has been measuring the pH between three types of masonry blocks for over seven years to monitor the values. Concern here is over PET geogrids which are known to be sensitive to very high alkalinity environments. Indeed, the values started high, but over time are now down to eight and lower. George has a paper in this regard.
13. **Landfill Failure Analysis** - Since our originally reported paper on ten landfill failures in a 2000 publication, we have accumulated ten more. All 20-failures have been analyzed using the ReSSA Code and are now available to members and associate members as GRI Report #41. The latest failure in this regard is in Easton, Pennsylvania. It is presently in litigation.
14. **Slow Pressurization of HDPE Geomembranes in Axi-Symmetric Testing*** - The ASTM D5716 method of testing geomembranes in a 3-D axi-symmetric mode uses a pressure rate of 6.9 kPa/min (1.0 psi/min). While such a rate is appropriate for most geomembrane types, it is very fast for HDPE which is semi-crystalline and cannot readily stress relax so as to accommodate the applied pressure. To investigate slower rates we have initiated a project with rates as low as 6.9 kPa/month (1.0 psi/month)! The last test, just now begun, is at a rate of 6.9 kPa/six months (1.0 psi/six months) and it will take about five years to conclude. A preliminary paper was presented at Geosynthetics '15 in Portland.
15. **Temperature Behavior Under Different Geosynthetic Layers** - Since exposed lifetime of geosynthetics is influenced by sunlight the lifetime of layers directly beneath the uppermost one (heat only, but no sunlight) is of interest. George Koerner has set up such a scenario on behalf of Watershed Inc., a GSI member.
16. **Forensic Analysis of Field Exposed GMs** - We have three ongoing analyses of GMs retrieved from the field after years of service. One is from a surface impoundment (comp. of EPI), another from a canal (comp. of BuRec) and the third from a landfill in New Jersey (comp. ALC).
17. **Mega Water Bags for Fresh Water Ocean Transportation** - Back in 1996 we gave the Terzaghi Lecture and suggested that massive geosynthetic bags filled with fresh water could easily be towed in the ocean thereby supplying drinking water where needed. To date it is occurring in Cypress and in several Caribbean Islands. A new GSI project is being considered. If readers have interest and ideas please advise while we are small in the experimental design phase.
18. **Generic Specifications** - A major continuing effort is ongoing with respect to the development and updating of GRI's generic geosynthetic specifications. The current status of these specifications is as follows:
 - Completed and Available on our Website
 - GM13 – HDPE Geomembranes
 - GM17 – LLDPE Geomembranes
 - GM18 – fPP and fPP-R Geomembranes
 - GM19 – Geomembrane Seams
 - GM21 – EPDM and EPDM-R Geomembranes
 - GM22 – Scrim Reinforced PE Barriers (New)
 - GM25 – LLDPE-R Geomembranes
 - GM28 – CSPE-R Geomembranes
 - GM30 – Coated Tape PE Barriers (New)
 - GT10 – Geotextile Tubes
 - GT12 – Geotextile Cushions
 - GT13 – Geotextile Separators
 - GCL3 – Geosynthetic Clay Liners
 - GC14 – Turf Reinforcement Mats (New)
 - GS15 – Geocells
 - Working: Available Upon Request
 - GGXX – Bidirectional Geogrids (active)
 - GGXX – Unidirectional Geogrids (active)

GNXX – Geonet Drainage Composites (active)

The complete set of formalized specifications are available to everyone (members and nonmembers) on the open section of our Home Page. Please download and use them accordingly. There is a brief tutorial accompanying each specification. Also note that this is where the latest modification will always be available. Of note is that GM22 and GCL 3 have been upgraded for stiffness and hydraulic conductivity, respectively.

19. Other GRI Standards - There are several GRI Standards in various forms of preparation. These include the following:

- A practice on field seaming inspection emphasizing the electrical leak location system (ELLS).
- Three standards on GCL joining so as to prevent/monitor panel separation.
- A standard on GN joining with plastic cable ties... see Item 10.
- A guide as to recommended testing of drainage geocomposites.
- A practice explaining the use of MARV for geotextiles
- A transverse rib bending test for homogeneous geogrids

Progress within GII (Information)

Our GSI Home Page is accessed as follows:

<<<http://www.geosynthetic-institute.org>>>

It has been revised and is being maintained through the fine efforts of Marilyn Ashley. Everyone (members and nonmembers) can access the open part, which has the following menu:

- | | |
|-----------------------------------|-------------------------|
| • Introduction to GSI | • Product Certification |
| • Prospectus | • Newsletter/Reports |
| • Associate Membership (Agencies) | • Internet Courses |
| • Members by Focus Groups | • GSI Members Links |
| • GSI Publications | • GSI Member Meetings |
| • GRI Specs, Guides, White Papers | • Courses at GSI |
| • Laboratory Accreditation | • Insp. Cert. Programs |

To go further one needs a members-only password. Your contact person (see the last section of this Newsletter/Report if you do not know who it is) must get a password from Marilyn Ashley. Marilyn can be reached by e-mail at mvashley@verizon.net. When you get into this section, the following information is available. This includes:

- | | |
|------------------------------------|-------------------------------------|
| • GRI Test Methods | • Links to the GSs World |
| • GRI Reports | • Keyword Search for Literature |
| • GRI Technical Papers (Citations) | • Example Problems |
| • Notes of GSI Meetings | • Frequently Asked Questions (FAQs) |

The Keywords Section contains about 35,000 citations which is the majority of the geosynthetics literature published in English. The GeoEnvironmental papers are being added. Citation retrieval is quite easy provided that you have a specific topic, or area, in mind. This is the section of the website that we (and others we are told) use the most in our daily activities.

In addition to the information provided in our home page as just mentioned, Jamie Koerner (Special Projects Coordinator) performs various surveys on pertinent topics in geosynthetics. The latest is a survey on the regulatory use of the Electrical Leak Location Survey (ELLS) method. See White Paper #34 on our Home Page for the state-of-the-practice in this regard. Also, if you have topics in need of the current status please advise accordingly.

Progress within GEI (Education)

GRI Reports

To date, we have 45 GRI Reports available to members and associate members. These reports vary in length from 30 to 200 pages and beginning with Report #25 they are on the password protected section of our home page. Prior to that date only the abstract is available online. All of them, however, are available in hard copy. Our most recent report is:

- #45 - A Review of 3000 Geosynthetic Q&As on the GMA Techline Since Its Inception in 2004. In it are the 100 "most difficult" questions asked and answered since the Techline's inception in 2004.

GSI Webinars (90 minutes long)

11:30 AM – 1:00 PM (Eastern Time Zone)
Registration at

www.geosynthetic-institute.org/webinar.htm

1.5 Professional Development Hours
Nonmembers Cost - \$250; Members Cost - \$200

Commentary on Webinars: Never in Bob K's long career has he "reached out" to so many people than when giving these GSI and ASCE webinars. For the single cost of \$250 or \$200 a feed is delivered over Adobe Connect to the requested site. This can be anywhere, e.g., office, conference room, auditorium or even sent to additional offices and sites. For example,

NY-DEC had the feed going into their Albany auditorium and then into the 13-regions of New York State. Clearly, hundreds of participants were involved. For one ASCE webinar there were 62-sites! *Dear readers; on-line distance learning, aka, webinars, is the way to communicate information to masses of people in an inexpensive and time efficient manner. Indeed, the future of learning is here!* The 2017 schedule of GSI Webinars is as follows:

Date	GSI No.	Title
January 4	W-5	Geosynthetics in Hydraulic Applications
January 18	W-18	Pond Liner Design & Performance
February 8	W-19	Geomembrane Wave (or Wrinkle) Management (New)
February 22	W-20	Geonet and Geospacer Drainage Materials Connections and Attachments (New)
March 8	W-9	Behavior & Analysis of 20 Solid Waste Landfill Failures
March 22	W-10	Wet (Bioreactor) Landfills for Rapid Degradation of MSW Organics
April 12	W-11	Lateral & Vertical Expansions over Landfills
April 26	W-6	Geosynthetics in Heap Leach Mining
May 10	W-12	Landfill Covers: Past-Present-Emerging
May 24	W-13	Beneficial Uses of Abandoned and/or Closed Landfills
June 14	W-14	Lifetime Predictions of Exposed & Nonexposed Geosynthetics
June 28	W-21	A Brief Overview of Geosynthetics and Their Major Applications (New)
July 12	W-15	In-Situ Stability of Soil Slopes Using Nailed GS
August 9	W-16	Sand Drains-to-Wick Drains to Sand Columns
September 13	W-17	Geosynthetics in Erosion Control
October 11	W-1	MSE Wall Failure Data Base (301 cases)
October 25	W-2	MSE Wall Back Drainage Design
November 8	W-3	MSE Wall Remediation and Monitoring
December 13	W-4	MSE Wall Field Construction Inspection Practices

Courses

We are now abandoning our in-house, one-day, courses (which have been given for the past 30-years) and delivering them in six segments over three consecutive days each morning and afternoon.

The newest of these course is an On-Line “Designing With Geosynthetics (DwG)” course. Please go to <http://www.geosynthetic-institute.org/courses.htm> and scroll down to Course #3. Here you will see the requisite details. The course itself is completely coordinated with the 6th Edition of the DwG textbook. It consists of 1540 slides with \approx 18 hours of voice over; about one minute for each slide. See the special writeup in this Newsletter/Report.

Contact Jamie Koerner at jrkoerner@verizon.net if you want information and details.

GSI Fellowships

A major change over previous years has been quite successful again this year. We now offer fellowships for masters and doctoral students. The stipend is \$5000 for a single year, rather than three multiple years. This change resulted in 16-proposals which were reviewed and graded by the GSI-BoD and ourselves. Nine were accepted and are listed below. If a specific proposal is of interest please contact Jamie Koerner at jrkoerner@verizon.net.

GSI Fellowships for 2016-'17 A.Y.

No.	Name	University	Advisor	Topic
1	Abbaspour, Aiyoub	George Mason University	Burak Tanyu	Clogging evaluation of drainage geotextiles using recycled concrete aggregate
2	Ekici, Anil	Middle East Technical Univ.	Nejan Huvaj	Interaction of marginal fills and geogrids for walls and slopes
3	Guo, Jun	University of Kansas	Jie Han	Soil column tests to evaluate wicking geotextile to remove water
4	Haselton, Henry	Montana State University	Steve Perkins	Biaxial response of geosynthetics
5	Kermani, Behnoud	Penn State University	Ming Xiao	Geotextile separation preventing particle movement into pavements due to cyclic loading
6	Maddah, Layal	Texas A&M	Jean-Louis Briaud	MSE Walls subjected to vehicle impact on roadside barrier systems
7	Morsy, Amr	University of Texas	Jorge Zornberg	Composite behavior of geosynthetic reinforced structures
8	Yilmaz, Mehmet	University of Wisconsin	James Tinjum and Craig Benson	Co-extruded EVOH geomembrane covers to avoid Landfill gas emissions
9	Zheng, Yewei	University of California SD	Patrick Fox	GRS abutments with bridge superstructure under seismic loading

Activities within GAI (Accreditation)

The Geosynthetic Accreditation Institute's (GAI) current mission is focused on a Laboratory Accreditation Program (LAP) for geosynthetic test methods. George Koerner is in charge of the program. The GAI-LAP was developed for accrediting geosynthetic testing laboratories on a test-by-test basis. GAI-LAP suggests that laboratories use ISO 17025 as their quality system model. In addition, the program uses the GSI lab as the reference test lab and

operates as an ISO 17011 enterprise. *It should be emphasized that our GSI lab does not conduct outside commercial testing.*

It should also be made clear that GAI-LAP does not profess to offer ISO certification, nor does it “certify” laboratory results. GAI-LAP provides accreditation to laboratories showing compliance with equipment and documentation for specific standard ASTM, ISO or GRI test methods. In addition, GAI-LAP verifies that an effective quality system exists at accredited laboratories by way of proficiency testing.

There have been significant additions to the number of GAI-LAP tests. Presently, there are 245 GAI-LAP test methods available for accreditation. Please consult our home page for a current listing.

As of September , 2016, the following laboratories are accredited by the GAI-LAP for the number of test methods listed in parenthesis. Contact personnel, telephone numbers and e-mails are also listed.

- 1^A - TRI/Environmental Inc. (155 tests)
Jarrett Nelson -- (512) 263-2101
jnelson@tri-env.com
- 3^A - Golder Associates (43 tests)
Henry Mock -- (770) 492-8280
Henry_Mock@golder.com
- 4^C - Geosynthetic Institute (109 tests)
George Koerner -- (610) 522-8440
gkoerner@dca.net
- 8^B - Propex Operating Co., Ringgold (11 tests)
Todd Nichols -- 438-553-3757
todd.nichols@propexglobal.com
- 9^B - Lumite (17 tests)
Benjamin Bell -- (770) 869-1187

If anyone desires more information on the GAI-LAP, its test methods, the associated laboratories, etc., a directory is published in December of each year. It is available on GSI's home page at <http://www.geosynthetic-institute.org> (Accreditation).

George R. Koerner

It was with great pleasure that we participated in the "Segunda Jornada de Ingenieria en Geosinteticos" organized by the IGS Capitulo Mexico Section. The event was held at the Colegio de Ingenieros Civiles (College of Civil Engineering) in Mexico City on October 28, 2016. The theme of the conference was "Geosynthetic in Transportation." This IGS event was organized in collaboration with the Mexican Association of Geotechnical Engineers.

From left to right - Dr. Rosemberg Reyes at the podium, Dr. Jorge Zornberg (past president IGS), Mr. Raul Aguilar Becerril (president SMIG), Mr. Ing. Jesus Felipe Verdugo Lopez (director S.T. SCT), Mr. M.C. Guillermo Lopez Mellado (secretary general IGS Mexico)

After the welcome address the conference briefing, goals and objectives were given by Dr. Rosemberg. Followed is the technical program which integrated four presentation around the conference theme of transportation. They were as follows;

1. Embankments over soft soils (Prof. Palmeira)
2. Walls and Slopes (Prof. Bathurst)
3. Drainage and Erosion Control (George Koerner)
4. Roadways (Prof. Zornberg)

From left to right - Dr. Ennio Marquez Palmeira, Dr. Jorge Zornberg, Dr. Richard Bathurst, Dr. George Koerner and Mr. M.C. Guillermo Lopez Mellado

The conference focused on the design, testing and construction of geosynthetics used in transportation and infrastructure facilities such as paved highways, unpaved roads, railroads, walls, steep slopes, embankments, filters, drains and erosion control. The presenters provided the latest information on design, testing and installation of geosynthetics in

transportation and infrastructure related systems. Also included are considerations in many areas of geotechnical engineering. The thrust was design-by-function leading to the determination of the factor-of-safety. Numerous examples were presented in the form of case histories. After each presentation there was time for Q & As which were excellent and showed that the Mexican engineers in attendance were quite familiar with the nuances of geosynthetics.

Five important geosynthetic companies were kind to sponsor the event. They were Tensar, TDM, TenCate, Mirafi, Huesker and Maccaferri. Technical short courses were offered on the morning of October 29th after the conference. All five of them were well attended. In addition to the short courses there was an outreach program for Young Professionals. The conference was well attended by one hundred and fifty people and was considered a great success by many. It was a pleasure to see so many federal, state and regional transportation engineers in attendance.

George Koerner (gsigeokoerner@gmail.com)

Activities within GCI (Certification)

GSI presently has three separate inspector certification programs. One (begun in 2006) is focused on QA/QC of field inspection of waste containment geosynthetics and compacted clay liners. The second (begun in 2011) is focused on MSE Wall, Berm and Slope field inspection. The third on Geosynthetic Designer Certification was begun on September 1, 2016. See our website at www.geosynthetic-institute.org under "certification" for a description and information on all three of them. They are similar in that a perspective candidate must...

- Be recommended by a professional engineer who knows, and can attest to, at least six months of acceptable experience performing professional services within the specific application area.
- Submit a completed application and be approved by the Geosynthetic Certification Institute to take the exam.
- Must successfully pass a written examination (70% of the questions is the passing grade) proctored by GCI or a GCI designated organization and graded by the Geosynthetic Certification Institute to become a certified inspector.
- Must pay a one-time fee which covers a five-year period upon completion of the above items. The fee is \$500 for five-years of certification.

Program #1 - Inspection of Liner Systems for Waste Containment Facilities

This program now in its eighth year has been recommended, and in some cases required, by solid waste owners, state regulators, and design consultants for proper QA/QC in field installation of both geosynthetic materials and compacted clay liners. The statistics to date are as follows.

Inspector Certification Test Results for Waste Containment Inspectors 2006 – 2016

Year	Geosynthetic Materials		Compacted Clay Liners	
	No. of people taking exam	No. of people failing exam	No. of people taking exam	No. of people failing exam
2006	141	5 (3%)	128	12 (9%)
2007	82	11 (13%)	73	12 (16%)
2008	95	25 (26%)	89	20 (22%)
2009	36	7 (19%)	36	2 (5%)
2010	59	12 (20%)	54	7 (13%)
2011	54	6 (11%)	53	3 (6%)
2012	34	5 (15%)	28	3 (11%)
2013	32	4 (12%)	30	1 (3%)
2014	45	1 (3%)	42	3 (7%)
2015	56	6 (11%)	51	6 (12%)
2016	36	4 (11%)	35	4 (11%)
TOTAL (to date)	670	86 (13%)	620	73 (12%)

The 5-year renewal periods for those having taken the exam before 2010 is ongoing and about 60% have renewed accordingly. This is felt to be encouraging from our perspective.

Program #2 - Inspection of MSE Walls, Berms and Slopes

While a field inspector cannot require proper design or direct a contractor how to build a wall, flaws can be identified for possible design modification or mitigation action. Furthermore, and at minimum, construction practices can be observed and corrected if inadequate or improper.

The official launch of this inspection program was on December 1, 2011 with a course and the examination afterward. More recently a somewhat revised course on November 29, 2012 was presented. Presently, the corresponding course for this certification program has been transferred into a series of six presentations over a consecutive three-day period. Contact Jamie Koerner at jrkoerner@verizon.net for details and arrangements.

The status of the program is shown in the following table.

Inspector Certification Test Results for
MSE Walls and Berms Inspectors
(2011-2016)

Bob Koerner robert.koerner@coe.drexel.edu
Marilyn Ashley mvashley@verizon.net

Year	Course Location	MSE Wall And Berms	
		No. of People Taking the Exam	No. of People Failing the Exam
2011	GSI Course	7	0
2012	GSI Course	6	0
2013	GSI Course	2	0
2014	GSI Course	3	0
2015	GSI Course	4	0
2016	GSI Course	2	0
TOTAL		24	0

Program #3 - Geosynthetic Designer Certification

The "Geosynthetic Designer Certification Program (GDCP)" is also now available. Please go to <http://www.geosynthetic-institute.org/gdcpintro.pdf> for the requisite details. Included are introduction (rationale behind the program was given in a recent GSI Column called "We're Losing the Battle"), disclaimer, requirements, application, reference material, sample questions, proctor manual and proctor application. In the *requirements section* you will see that the applicant must;

- be a graduate of an accredited engineering program,
- have six-months geosynthetic designer experience,
- complete the application form,
- pay the \$500 fee for 5-years certification, and
- take a 45-question examination with \geq 70% passing.

The *examination* itself is subdivided into 15-sections, each consisting of five questions. A candidate must answer any 3 questions in each section, making a total of 45 questions to be answered. Most of the questions are numeric, as is geosynthetic design practice in general. Unlike our other certification examination questions, however, this examination is of an open-book, open-notes format and does require a calculator so as to "crunch the numbers".

The on-line courses for preparation of three of these certification programs is available in a series of six-90 minute webinars. Contact Jamie Koerner at jrkoerner@verizon.net for details and arrangements.

Lastly, please spread-the-word within your organization and to others as well. We sincerely hope that one, or all three, of the above programs will be beneficial in upgrading the technical base of geosynthetic design and installation so as to properly utilize all of our geosynthetic materials in all of their many applications. All three programs are ready to go and if you have questions and/or comments please contact us accordingly.

The GSI Affiliated Institutes

It has long been realized that the information generated within the GSI group should have a timely outlet to all countries, and in all languages. To this end, GSI has created affiliated institutes in three countries (Korea, Taiwan and India), and potentially others in the future. These affiliated institutes are full members of GSI and are empowered to translate and use all available information so as to create similar institutes and activities in their respective countries.

GSI-Korea was formed on February 9, 1998 as a collaborative effort between FITI Testing and Research Institute (a quasi-government organization) and INHA University (through its Geosynthetics Research Laboratory). It is presently in the transition of being held entirely within INHA University.

INHA University is located in Incheon and the geosynthetics laboratory is led by Professor Han-Yong Jeon. Dr. Jeon has 10-students working on geosynthetic-related projects and is extremely active both nationally and internationally. His active participation at conferences worldwide is very admirable. He has provided research and development in many geosynthetic subjects including geotextiles, geomembranes, geocells, additives for GCLs, recycled plastics for improved formulations, etc.

GSI-Taiwan was formed on August 18, 2000 and is wholly contained within the National Pingtung University of Science and Technology in Nei Pu, Pingtung (southern Taiwan). It completely parallels GSI in that it has specific units for research, education, information, accreditation and certification. The Director is Dr. Chiwan Wayne Hsieh who is a Professor in the Department of Civil Engineering and Dean of the R & D Office. GSI-Taiwan has an Taiwanese consortium of geogrid/geotextile manufacturers who work toward producing quality products according to the draft GRI geogrid specifications and the associated test methods. As such, GSI-Taiwan is a GAI-LAP accredited laboratory for 59 geosynthetic test methods. Dr. Hsieh has 10-students working on geosynthetic-related projects and is extremely active nationally and internationally. GSI Taiwan has hosted three very successful internal conferences to date and has also held a much broader one, namely, GSI-Asia in Taichung, Taiwan.

GSI-India under the new direction of Dr. A. K. Mukhopadhyay (who succeeds Dr. A. N. Desai) was formed in 2015. The hosting organization is the

Bombay Textile Research Association (BTRA) which is world known for its excellence in textile R & D and is currently branching out into all forms of geosynthetics. We are delighted in this regard and, as a side-note, Dr. Mukhopadhyay has replaced Dr. Desai on GSI's Board of Directors to fill out his term. (See associated writeup on the "Global Geosynthetics Summit" in the December, 2014 Newsletter/Report).

Items of Interest

Please note that this section will no longer be carried in these quarterly GSI Newsletter/Reports. This is due primarily to limit the length of the reports which have grown considerably over time.

New "Designing With Geosynthetics" On-Line Course with an Accompanying Geosynthetic Designer Certification Program

We are delighted to report two newly implemented programs that GSI has just developed:

1. An On-Line "Designing With Geosynthetics (DwG)" course is now available. Please go to <http://www.geosynthetic-institute.org/courses.htm> and scroll down to Course #3. Here you will see the requisite details. The course itself is completely coordinated with the 6th Edition of the DwG textbook. It consists of 1540 slides with \approx 18 hours of voice over; about one minute for each slide. See the following table for the specific contents.

DwG Book Chapter Number	Title	DwG Course Sections Covered	Number of Slides	Presentation Time (min.)
1	Geosynthetics	all	121	60
2a	Geotextiles	2.1 to 2.4	119	90
2b	Geotextiles	2.5 to 2.6	122	85
2c	Geotextiles	2.7	65	70
2d	Geotextiles	2.8 to 2.11	126	85
3	Geogrids	all	112	85
4	Geonets	all	72	60
5a	Geomembranes	5.1 to 5.2	92	65
5b	Geomembranes	5.3 to 5.5	115	70
5c	Geomembranes	5.6	100	80
5d	Geomembranes	5.7 to 5.13	152	90
6a	GCLs	all	89	70
6b	GCLs	new topics	72	55
7	Geofoam	all	67	40
8	Geocomposites	all	116	80
TOTALS			1540	1085 \approx 18 hours

That said, we feel the way to optimize the learning process during this course is to have a copy of the DwG e-book on a lap-top or tablet (it is available from Amazon, Barnes & Noble and the publisher Xlibris for \$7.00), with the on-line course slides on a desk-top and work the two computers simultaneously slide-by-slide and page-by-page. The fee is \$1000 for members and \$3000 for nonmembers, each having six-months of access time. Obviously, a group of people can take the course together as well as individuals by themselves in any conceivable location. If desired, the course carries with it 18 professional development hours (PDHs).

2. The "Geosynthetic Designer Certification Program (GDGP)" is also now available. Please go to <http://www.geosynthetic-institute.org/gdcpintro.pdf> for the requisite details. Included are an introduction (the rationale behind the program was given in a recent GSI Column called "We're Losing the Battle"), disclaimer, requirements, application, reference material, sample questions, proctor manual and proctor application. In the *requirements section* you will see that the applicant must;
 - be a graduate of an accredited engineering program,
 - have six-months geosynthetic design experience,
 - complete the application form,
 - pay the \$500 fee for 5-years of certification, and
 - take a 45-question examination with 70% passing.

The *examination* itself is subdivided into 15-sections (recall previous table), each consisting of five questions. A candidate must answer any 3 questions in each section, making a total of 45 questions to be answered. Most of the questions are numeric, as is geosynthetic design practice in general. Please scroll down to the "Sample Questions" to get insight as to the level of the examination. Unlike our other certification examination questions, however, this examination is of an open-book, open-notes format and does require a calculator so as to "crunch the numbers".

Lastly, please spread-the-word within your organization and to others as well. We sincerely hope that one, or both, of the above two programs will be beneficial in upgrading the technical base of geosynthetic designers so as to properly utilize all of our geosynthetic materials in all of their many applications. Both programs are ready to go and if you have questions and/or comments please contact us accordingly.

GSI's Member Organizations

We sincerely thank all of our sponsoring organizations. Without them, GSI simply could neither happen nor exist. The current GSI member organizations and their contact members are listed below. **Our newest members are Altakomol Alhadith Cont. Co. of Saudi Arabia with Carlos Lasserre; INOVA Geosynthetics/AERO Aggregates with Archie Filshill; Sotrafa Agrualura y Geosinteticos of Spain with Jose Miguel Munoz Gomez; Kaytech Fabrics Co. of South Africa with Garth James; Interwrap Inc. with Clive Mills/Martin Vido, Borouge Pte. Ltd. of Singapore with *Mohamed Ali Jaber/Peter Malmros/Rick Cui* and Intermas Group of Spain with Rubén Palacios contact members. Thanks to all and welcome to GSI!!!**
